ANANT LUXE RESORT

HOTEL MANAGEMENT SYSTEM

PRESENTED BY:ANANTIKA

COURSE:BCA[AIML]

SESSION: 2025–2026

INTRODUCTION

Anant Luxe Resort is a modern luxury hotel management website designed to provide a seamless and premium user experience.This project simulates real-world hotel systems by allowing users to:

- Book rooms online
- Explore luxury services
- Order food
- Make payments
- It also includes an admin panel to manage bookings and track performance.

OBJECTIVES

The main objectives of this project are:

1 To design a user-friendly hotel website

2 To provide online room booking functionality

3 To implement food ordering system

4 To simulate QR-based payment system

5 To create an admin dashboard for monitoring

TECHNOLOGIES USED

This project is built using:

- HTML – for structure of website
- CSS – for styling and layout
- JavaScript – for functionality and logic
- Local Storage – for storing booking and order data

USER INTERFACE FEATURES

The website provides a premium luxury interface including:

- Full-screen video homepage
- Smooth scrolling navigation
- High-quality images
- Responsive design (works on all devices)
- Modern UI similar to luxury hotel websites

ROOM BOOKING SYSTEM

The booking system allows users to:

- Enter personal details (name, phone, guests)
- Select check-in and check-out dates

Choose room type:

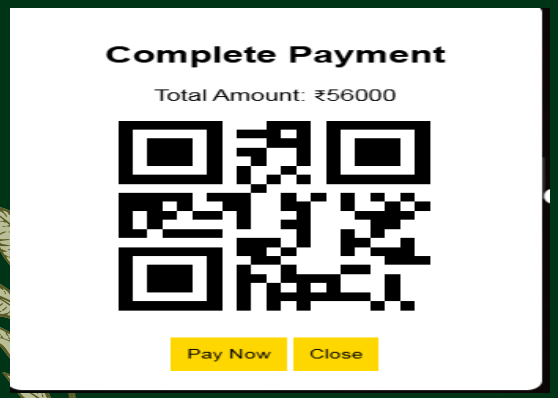
- Deluxe Room
- Executive Room
- Luxury Suite
- Presidential Suite
- The system automatically calculates the total cost.

DINING SYSTEM

The dining section includes:

- A detailed menu with multiple dishes
- Each item has:
- Image
- Price
- Order button
- Users can:
- Choose dining type (room/dine-in
-)Enter room number (if needed)
- Place order easily

PAYMENT SYSTEM



The system includes a simulated payment feature:

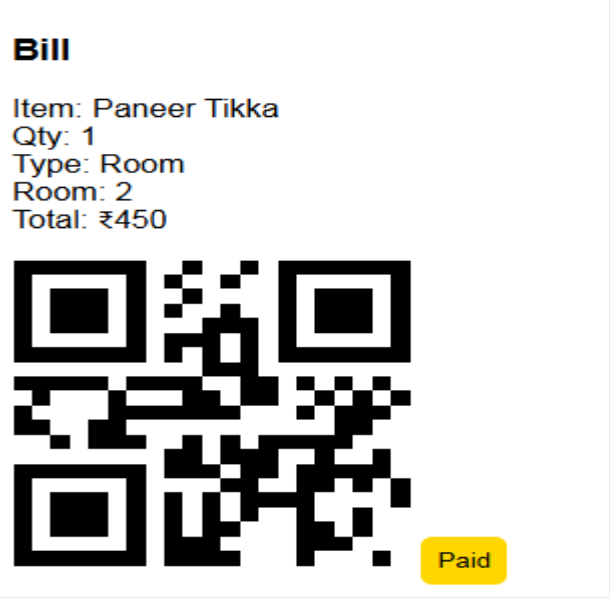
- QR code is generated for payment
- User scans QR code to pay
- Payment confirmation is shown
- Works as a demo of real UPI system

RECIEPT GENERATION

After booking or ordering:

- A receipt is generated automatically
- It includes:
- Customer name
- Room/food details
- Total amount
- Date & time

This makes the system more realistic.



GALLERY & EXPERIENCE

The website includes:

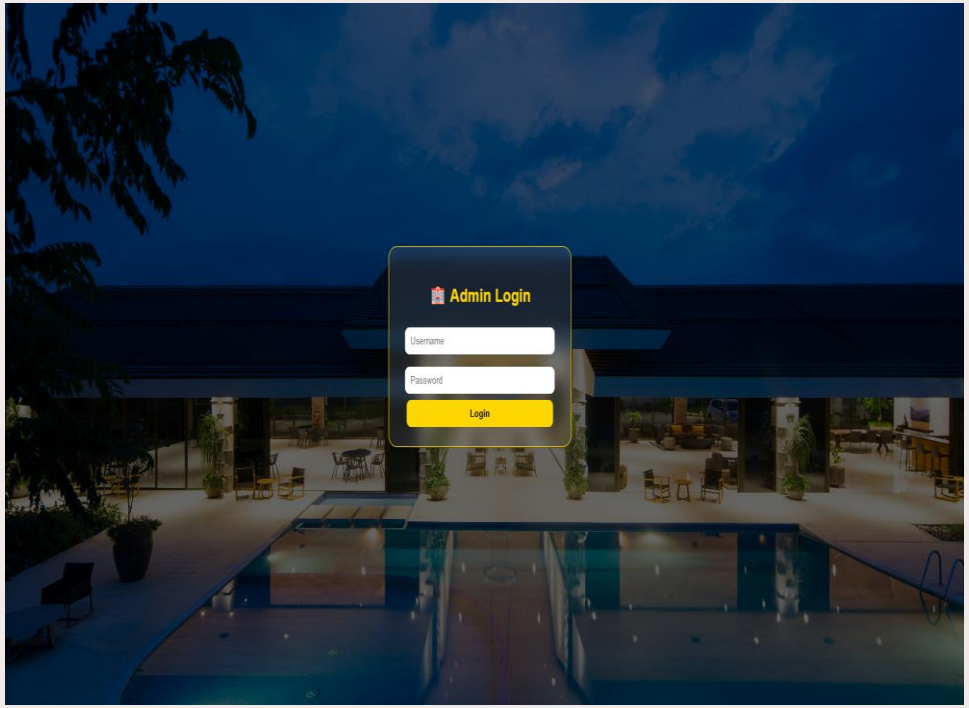
- Gallery with high-quality images
- Experience section with:
- Gym
- Spa
- Swimming pool
- Lounge
- Gaming zone
- Rooftop bar

Each feature is visually represented with images.

ADMIN PANEL:

Admin panel features:

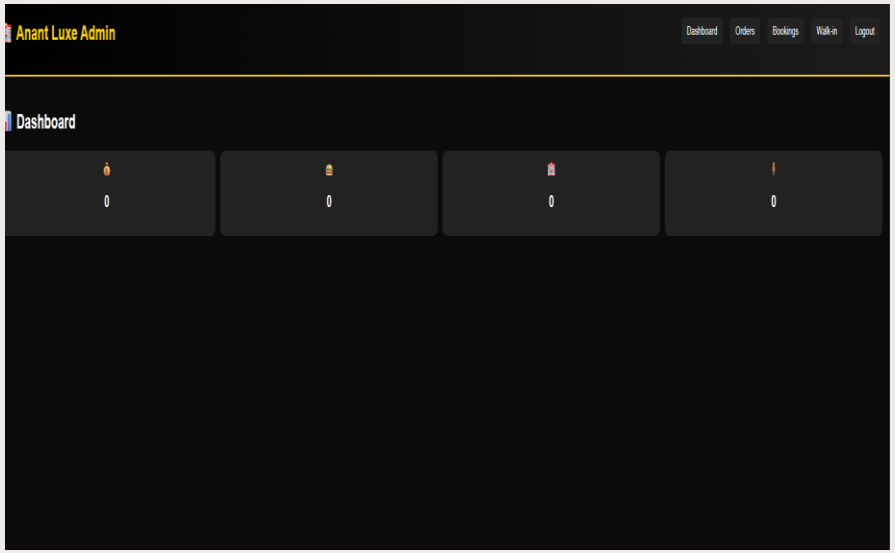
- Secure login system
- Dashboard interface
- View all bookings
- View all orders
- Track revenue
- Graph representation using charts



WORKING OF SYSTEM

Step-by-step working:

- User visits website
- Explores rooms/services
- Books room or orders food
- Data stored in localStorage
- Payment simulated via QR
- Admin logs in
- Admin views bookings and orders



ADVANTAGES:

Easy to use

Fast and responsive

No database required

Works offline

Good for learning real-world systems

LIMITATIONS:

Works only on same device/browser

No real payment gateway

No backend/database

Data is not stored permanently

CONCLUSION:

- This project successfully demonstrates a basic hotel management system with both user and admin functionalities.
- It provides a realistic experience of how hotel websites work and helps in understanding web development concepts in a practice
