Declaration

I hereby declare that the project titled “Hotel Management System – Anant Luxe Resort” is an original work carried out by me. This project has been completed as part of my academic curriculum. All the information included in this project is true and correct to the best of my knowledge.

Introduction

A Hotel Management System (HMS) is a software application that helps hotels manage their daily operations such as room booking, customer records, billing, and services.

Anant Luxe Resort is a modern luxury hotel that aims to provide seamless customer experience using digital systems. This project focuses on developing a system that automates hotel operations, reduces manual work, and improves efficiency.

Hardware Requirements

- Computer/Laptop
- Minimum 4GB RAM
- Processor: Intel i3 or above
- Hard Disk: 500GB
- Internet Connection

Software Requirements

- Operating System: Windows / macOS / Linux
- Web Browser: Chrome / Edge
- Programming Languages: HTML, CSS, JavaScript
- Tools: VS Code / Notepad++

SDLC Phases

SDLC (Software Development Life Cycle) is a process used to develop software in a structured way. It includes multiple phases like planning, analysis, design, implementation, testing, deployment, and maintenance.

Planning Phase

- In this phase, the goals of the system are defined.
- Identify hotel needs
- Define project scope
- Decide features like booking, billing, menu system
- Time and cost estimation
-

Analysis Phase

- Study current manual system
- Identify problems (slow booking, errors)
- Gather user requirements
- Define system functionalities

Design Phase

- Create layout of website
- Design user interface (UI)
- Database structure planning
- Flowcharts and system architecture

Implementation Phase

- Coding using HTML, CSS, JavaScript

- Creating pages like Home, Menu, Booking
- Adding features like “Order Now” and “Pay Now”
- QR-based payment integration

Testing Phase

- Check all buttons and features
- Fix bugs (like payment button issues)
- Ensure proper working of booking system
- User testing

Deployment Phase

- Upload project to server
- Make system live for users
- Ensure accessibility

Maintenance Phase

- Fix errors after deployment
- Update features
- Improve performance
- Security updates

Advantages

- Saves time
- Reduces manual work
- Improves accuracy
- Better customer experience
- Easy data management

Disadvantages

- Requires technical knowledge
- Initial cost is high
- System failure risk
- Internet dependency

Outcomes

- Efficient hotel operations
- Faster booking system
- Digital payment system
- Improved customer satisfaction

Conclusion

The Hotel Management System for Anant Luxe Resort successfully demonstrates how technology can improve hotel services. It simplifies booking, ordering, and billing processes, making the system efficient and user-friendly.
